Report of task 5 ai lab

AI Lab Task 5 Report

Name: Hadia Aslam

Roll No: 051

1. Objective

To understand and implement Minimax and Alpha-Beta Pruning algorithms in Python.

2. Tools Used

- Python
- VS Code

3. What I Did

- Created a Minimax function.
- Implemented Alpha-Beta Pruning.
- Used different scores to test the algorithms.
- Compared the number of visited leaf nodes.

4. Output

- Minimax Value: 5
- Minimax Leaves: 8
- Alpha-Beta Value: 5
- Alpha-Beta Leaves: 6
- Reversed Alpha-Beta Value: 5
- Reversed Alpha-Beta Leaves: 8

5. Conclusion

In this task, I learned how Minimax and Alpha-Beta Pruning work. Alpha-Beta Pruning reduced the number of visited nodes from 8 to 6 while giving the same result.
