Lab 1 Report

Topic: Decision Making and Threshold-Based Conditions

1. Objective

- To understand decision-making using Python.
- To apply conditions and thresholds.
- To check different cases using simple functions.

2. Tools Used

- Python
- Jupyter Notebook

3. Work Done

- Created functions using `def`.
- Used `if-else` conditions.
- Checked scores and document completion.
- Compared symbolic and threshold-based decisions.
- Tested different application cases using GPA and attendance.

4. Results

- All test cases were executed successfully.
- The program gave Review or Hold decisions.
- It also displayed reasons when an application was placed on Hold.

5. Conclusion

In this lab, I learned how to use Python conditions and functions to make decisions. I also practiced testing different cases and checking their results.
